## WHO Model List of Essential Medicines (2019)

### Explanatory notes

The **core list** presents a list of minimum medicine needs for a basic health-care system, listing the most efficacious, safe and cost–effective medicines for priority conditions. Priority conditions are selected on the basis of current and estimated future public health relevance, and potential for safe and cost-effective treatment.

Where the [c] symbol is placed next to an individual medicine or strength of medicine on the core list it signifies that there is a specific indication for restricting its use to children.

The **complementary list** presents essential medicines for priority diseases, for which specialized diagnostic or monitoring facilities, and/or specialist medical care, and/or specialist training are needed. In case of doubt medicines may also be listed as complementary on the basis of consistent higher costs or less attractive cost-effectiveness in a variety of settings.

Where the **[c]** symbol is placed next to an individual medicine or strength of medicine on the complementary list it signifies that the medicine(s) require(s) specialist diagnostic or monitoring facilities, and/or specialist medical care, and/or specialist training for their use in children.

The **square box symbol (** $\square$ **)** is primarily intended to indicate similar clinical performance within a pharmacological class. The listed medicine should be the example of the class for which there is the best evidence for effectiveness and safety. In some cases, this may be the first medicine that is licensed for marketing; in other instances, subsequently licensed compounds may be safer or more effective. Where there is no difference in terms of efficacy and safety data, the listed medicine should be the one that is generally available at the lowest price, based on international drug price information sources. Not all square boxes are applicable to medicine selection for children.

Therapeutic equivalence is indicated only on the basis of reviews of efficacy and safety and when consistent with WHO clinical guidelines. National lists should not use a similar symbol and should be specific in their final selection, which would depend on local availability and price.

The graph symbol indicates that there is an age or weight restriction on use of the medicine; details for each medicine can be found in Table 1.1.

The presence of an entry on the Essential Medicines List carries no assurance as to pharmaceutical quality. It is the responsibility of the relevant national or regional drug regulatory authority to ensure that each product is of appropriate pharmaceutical quality (including stability) and that, when relevant, different products are interchangeable.

For recommendations and advice concerning all aspects of the quality assurance of medicines see the WHO Medicines website http://www.who.int/medicines/areas/quality\_safety/quality\_assurance/en/.

Medicines and dosage forms are listed in alphabetical order within each section and there is no implication of preference for one form over another. Standard treatment guidelines should be consulted for information on appropriate dosage forms.

The main terms used for dosage forms in the Essential Medicines List can be found in Table 1.2.

Definitions of many of these terms and pharmaceutical quality requirements applicable to the different categories are published in the current edition of *The International Pharmacopoeia* <a href="http://www.who.int/medicines/publications/pharmacopoeia">http://www.who.int/medicines/publications/pharmacopoeia</a>.

1.1 General anaesthetics and oxygen     1.1.1 Inhalational medicines		
1.1.1 Inhalational medicines		
halothane	Inhalation.	
isoflurane	Inhalation.	
nitrous oxide	Inhalation.	
oxygen	Inhalation (medical gas).	
1.1.2 Injectable medicines	1	
ketamine	Injection: 50 mg (as hydrochloride)/ mL in 10- mL vial.	
	Injection: 10 mg/ mL; 20 mg/ mL.	
propofol*	* Thiopental may be used as an alternative depending on local availability and cost.	
1.2 Local anaesthetics		
	Injection: 0.25%; 0.5% (hydrochloride) in vial.	
□ bupivacaine	Injection for spinal anaesthesia: 0.5% (hydrochloride) in 4- mL ampoule to be mixed with 7.5% glucose solution.	
	Injection: 1%; 2% (hydrochloride) in vial.	
□ lidocaine	Injection for spinal anaesthesia: 5% (hydrochloride) in 2- mL ampoule to be mixed with 7.5% glucose solution.	
	Topical forms: 2% to 4% (hydrochloride).	
	Dental cartridge: 2% (hydrochloride) + epinephrine 1:80 000.	
lidocaine + epinephrine (adrenaline)	<b>Injection:</b> 1%; 2% (hydrochloride <b>or</b> sulfate) + epinephrine 1:200 000 in vial.	
Complementary List		
	Injection: 30 mg (hydrochloride)/ mL in 1- mL ampoule.	
ephedrine	(For use in spinal anaesthesia during delivery, to prevent hypotension).	
1.3 Preoperative medication and sedation for short-term procedures		
atropine	Injection: 1 mg (sulfate) in 1- mL ampoule.	
	Injection: 1 mg/ mL.	
□ midazolam	Oral liquid: 2 mg/ mL [c].	
	<b>Tablet:</b> 7.5 mg; 15 mg.	
morphine	Injection: 10 mg (sulfate or hydrochloride) in 1- mL ampoule.	

1.4 Medical gases		
	Inhalation	
	For use in the management of hypoxaemia.	
oxygen*	*No more than 30% oxygen should be used to initiate resuscitation of neonates less than or equal to 32 weeks of gestation.	
2. MEDICINES FOR PAIN AND PALLIATIVE CA	ARE	
2.1 Non-opioids and non-steroidal anti-inflammatory	medicines (NSAIMs)	
acetylsalicylic acid	Suppository: 50 mg to 150 mg.	
acctylsalicylic acid	Tablet: 100 mg to 500 mg.	
	Oral liquid: 200 mg/5 mL.	
ibuprofen <b>a</b>	<b>Tablet:</b> 200 mg; 400 mg; 600 mg.	
	a Not in children less than 3 months.	
	<b>Oral liquid:</b> 120 mg/5 mL; 125 mg/5 mL.	
	Suppository: 100 mg.	
paracetamol*	Tablet: 100 mg to 500 mg.	
	* Not recommended for anti-inflammatory use due to lack of proven benefit to that effect.	
2.2 Opioid analgesics		
codeine	Tablet: 30 mg (phosphate).	
fentanyl*	<b>Transdermal patch:</b> 12 micrograms/hr; 25 micrograms/hr; 50 micrograms/hr; 75 micrograms/hr; 100 micrograms/hr	
	*for the management of cancer pain	
	Granules (slow-release; to mix with water): 20 mg –200 mg (morphine sulfate).	
	<b>Injection:</b> 10 mg (morphine hydrochloride <b>or</b> morphine sulfate) in 1- mL ampoule.	
□ morphine*	<b>Oral liquid:</b> 10 mg (morphine hydrochloride <b>or</b> morphine sulfate)/5 mL.	
	<b>Tablet (slow release):</b> 10 mg–200mg (morphine hydrochloride <b>or</b> morphine sulfate).	
	Tablet (immediate release): 10 mg (morphine sulfate).	
	*Alternatives limited to hydromorphone and oxycodone	

Complementary list			
	Tablet: 5 mg; 10 mg (as hydrochloride)		
	Oral liquid: 5mg/5mL; 10mg/5mL (as hydrochloride)		
methadone*	Concentrate for oral liquid: 5 mg/ mL; 10mg/ mL (as hydrochloride)		
	*For the management of cancer pain.		
2.3 Medicines for other common symptoms in palliat	ive care		
amitriptyline	<b>Tablet:</b> 10 mg; 25 mg; 75 mg.		
ovelizing [o]	Injection: 50 mg/ mL.		
cyclizine [c]	Tablet: 50 mg.		
	Injection: 4 mg/ mL in 1- mL ampoule (as disodium phosphate salt).		
dexamethasone	Oral liquid: 2 mg/5 mL.		
	Tablet: 2 mg [c]; 4 mg.		
	Injection: 5 mg/ mL.		
diazepam	Oral liquid: 2 mg/5 mL.		
diazopam	Rectal solution: 2.5 mg; 5 mg; 10 mg.		
	Tablet: 5 mg; 10 mg.		
docusate sodium	Capsule: 100 mg.		
	Oral liquid: 50 mg/5 mL.		
fluoxetine <b>a</b>	Solid oral dosage form: 20 mg (as hydrochloride).		
	a >8 years.		
	Injection: 5 mg in 1- mL ampoule.		
haloperidol	Oral liquid: 2 mg/ mL.		
	Solid oral dosage form: 0.5 mg; 2mg; 5 mg.		
hyoscine butylbromide	Injection: 20 mg/ mL.		
hyoscine hydrobromide [c]	Injection: 400 micrograms/ mL; 600 micrograms/ mL.		
	Transdermal patches: 1 mg/72 hours.		
lactulose [c]	<b>Oral liquid:</b> 3.1–3.7 g/5 mL.		
loperamide	Solid oral dosage form: 2 mg.		
	Injection: 5 mg (hydrochloride)/mL in 2-mL ampoule.		
metoclopramide	Oral liquid: 5 mg/5 mL.		
	Solid oral form: 10 mg (hydrochloride).		
	Injection: 1 mg/ mL; 5 mg/ mL.		
midazolam	Solid oral dosage form: 7.5 mg; 15 mg.		
	Oral liquid: 2mg/ mL [c].		
□ ondansetron [c] a	Injection: 2 mg base/ mL in 2- mL ampoule (as hydrochloride).		
	Oral liquid: 4 mg base/5 mL.		

	Solid oral dosage form: Eq 4 mg base; Eq 8 mg base.		
	<b>a</b> >1 month.		
senna	Oral liquid: 7.5 mg/5 mL.		
3. ANTIALLERGICS AND MEDICINES USED IN ANAPHYLAXIS			
dexamethasone	<b>Injection:</b> 4 mg/ mL in 1- mL ampoule (as disodium phosphate salt).		
epinephrine (adrenaline)	<b>Injection:</b> 1 mg (as hydrochloride <b>or</b> hydrogen tartrate) in 1- mL ampoule.		
hydrocortisone	Powder for injection: 100 mg (as sodium succinate) in vial.		
	Oral liquid: 1 mg/ mL.		
□ loratadine *	Tablet: 10 mg.		
	*There may be a role for sedating antihistamines for limited indications (EMLc).		
	Oral liquid: 5 mg/ mL [c].		
□ prednisolone	Tablet: 5 mg; 25 mg.		
4. ANTIDOTES AND OTHER SUBSTANCES US	SED IN POISONINGS		
4.1 Non-specific			
charcoal, activated	Powder.		
4.2 Specific			
and the state of	Injection: 200 mg/ mL in 10- mL ampoule.		
acetylcysteine	Oral liquid: 10% [c]; 20% [c].		
atropine	Injection: 1 mg (sulfate) in 1- mL ampoule.		
calcium gluconate	Injection: 100 mg/ mL in 10- mL ampoule.		
methylthioninium chloride (methylene blue)	Injection: 10 mg/ mL in 10- mL ampoule.		
naloxone	Injection: 400 micrograms (hydrochloride) in 1- mL ampoule.		
penicillamine	Solid oral dosage form: 250 mg.		
potassium ferric hexacyano-ferrate(II) -	Powder for oral administration.		
2H <sub>2</sub> O(Prussian blue)			
2H <sub>2</sub> O(Prussian blue) sodium nitrite	Injection: 30 mg/ mL in 10- mL ampoule.		

deferoxamine	Powder for injection: 500 mg (mesilate) in vial.
dimercaprol	Injection in oil: 50 mg/ mL in 2- mL ampoule.
fomepizole	Injection: 5 mg/ mL (sulfate) in 20- mL ampoule or 1 g/ mL (base) in 1.5- mL ampoule.
sodium calcium edetate	Injection: 200 mg/ mL in 5- mL ampoule.
succimer	Solid oral dosage form: 100 mg.
5. ANTICONVULSANTS/ANTIEPILEPT	TICS
	Oral liquid: 100 mg/5 mL.
carbamazepine	Tablet (chewable): 100 mg; 200 mg.
	Tablet (scored): 100 mg; 200 mg.
diazepam	Gel or rectal solution: 5 mg/ mL in 0.5 mL; 2- mL; 4- mL tubes.
	<b>Tablet:</b> 25 mg; 50 mg; 100 mg; 200 mg.
lamotrigine*	<b>Tablet (chewable, dispersible):</b> 2 mg; 5 mg; 25 mg; 50 mg; 100 mg; 200 mg.
	*as adjunctive therapy for treatment-resistant partial or generalized seizures.
□ lorazepam	Parenteral formulation: 2 mg/ mL in 1- mL ampoule; 4 mg/ mL in 1- mL ampoule.
magnesium sulfate*	Injection: 0.5g/ mL in 2- mL ampoule (equivalent to 1 g in 2 mL; 50% weight/volume); 0.5g/ mL in 10- mL ampoule (equivalent to 5 g in 10 mL; 50% weight/volume).
	* For use in eclampsia and severe pre-eclampsia and not for other convulsant disorders.
	Solution for oromucosal administration: 5 mg/mL; 10 mg/mL
	Ampoule*: 1 mg/ mL; 10 mg/mL
midazolam	*for buccal administration when solution for oromucosal administration is not available
	Injection: 200 mg/ mL (sodium).
phenobarbital	Oral liquid: 15 mg/5 mL.
	Tablet: 15 mg to 100 mg.
	Injection: 50 mg/ mL in 5- mL vial (sodium salt).
	Oral liquid: 25 mg to 30 mg/5 mL.*
	Solid oral dosage form: 25 mg; 50 mg; 100 mg (sodium salt).
phenytoin	Tablet (chewable): 50 mg.
	* The presence of both 25 mg/5 mL and 30 mg/5 mL strengths on the same market would cause confusion in prescribing and dispensing and should be avoided.
valproic acid (sodium valproate)	Oral liquid: 200 mg/5 mL.

Tablet (enteric-coated): 200 mg; 500 mg (sodium valproate).       Complementary List       ethosuximide     Capsule: 250 mg. Oral liquid: 250 mg/5 mL.       valproic acid (sodium valproate)     Injection: 100 mg/ mL in 4- mL ampoule; 100 mg/ mL in 10- mL ampoule.       6. ANTI-INFECTIVE MEDICINES     6.1.1 Intestinal anthelminthics       6.1.1 Intestinal anthelminthics     Tablet (chewable): 400 mg.       ivermectin     Tablet (scored): 3 mg.       levamisole     Tablet: 50 mg; 150 mg (as hydrochloride).       mebendazole     Tablet (chewable): 500 mg.       niclosamide     Tablet (chewable): 500 mg.       praziquantel     Tablet (chewable): 500 mg (as embonate or pamoate)/ mL. Tablet (chewable): 250 mg (as embonate or pamoate).       6.1.2 Antifilarials     Tablet (chewable): 400 mg.       diethylcarbamazine     Tablet: 50 mg; 100 mg (dihydrogen citrate).       ivermectin     Tablet (scored): 3 mg.       6.1.3 Antischistosomals and other antitrematode medicines       praziquantel     Tablet: 600 mg.       triclabendazole     Tablet: 250 mg. #### 6.2 Antibacterials

To assist in the development of tools for antibiotic stewardship at local, national and global levels and to reduce antimicrobial resistance, the Access, Watch, Reserve (AWaRe) classification of antibiotics was developed – where antibiotics are classified into different groups to emphasize the importance of their appropriate use.

#### ACCESS GROUP ANTIBIOTICS

This group includes antibiotics that have activity against a wide range of commonly encountered susceptible pathogens while also showing lower resistance potential than antibiotics in the other groups. Selected Access group antibiotics are recommended as essential first or second choice empiric treatment options for infectious syndromes reviewed by the EML Expert Committee and are listed as individual medicines on the Model Lists to improve access and promote appropriate use. They are essential antibiotics that should be widely available, affordable and quality assured.

#### WATCH GROUP ANTIBIOTICS

This group includes antibiotic classes that have higher resistance potential and includes most of the highest priority agents among the Critically Important Antimicrobials for Human Medicine<sup>1</sup> and/or antibiotics that are at relatively high risk of selection of bacterial resistance. These medicines should be prioritized as key targets of stewardship programs and monitoring. Selected Watch group antibiotics are recommended as essential first or second choice empiric treatment options for a limited number of specific infectious syndromes and are listed as individual medicines on the Model Lists.

<sup>1</sup> http://apps.who.int/iris/bitstream/10665/251715/1/9789241511469-eng.pdf?ua=1

#### RESERVE GROUP ANTIBIOTICS

This group includes antibiotics and antibiotic classes that should be reserved for treatment of confirmed or suspected infections due to multi-drug-resistant organisms. Reserve group antibiotics should be treated as "last resort" options. Selected Reserve group antibiotics are listed as individual medicines on the Model Lists when they have a favourable risk-benefit profile and proven activity against "Critical Priority" or "High Priority" pathogens identified by the WHO Priority Pathogens List<sup>1</sup>, notably carbapenem resistant *Enterobacteriaceae*. These antibiotics should be accessible, but their use should be tailored to highly specific patients and settings, when all alternatives have failed or are not suitable. These medicines could be protected and prioritized as key targets of national and international stewardship programs involving monitoring and utilization reporting, to preserve their effectiveness.

#### 6.2.4 Antileprosy medicines

Medicines used in the treatment of leprosy should never be used except in combination. Combination therapy is essential to prevent the emergence of drug resistance. Colour-coded blister packs (MDT blister packs) containing standard two-medicine (paucibacillary leprosy) or three-medicine (multibacillary leprosy) combinations for adult and childhood leprosy should be used. MDT blister packs can be supplied free of charge through WHO.

#### 6.4.2.3 Protease inhibitors

Selection of protease inhibitor(s) from the Model List will need to be determined by each country after consideration of international and national treatment guidelines and experience. Ritonavir is recommended for use in combination as a pharmacological booster, and not as an antiretroviral in its own right. All other protease inhibitors should be used in boosted forms (e.g. with ritonavir).

#### 6.4.4.2 Medicines for hepatitis C

WHO guidelines recommend the use of pangenotypic direct-acting antiviral (DAA) regimens for the treatment of persons with chronic HCV infection aged 18 years and above.

WHO recommended treatment regimens for adolescents aged 12-17 years or weighing at least 35 kg with chronic HCV infection are genotype-specific.

Pangenotypic DAAs should be considered as therapeutically equivalent for the purposes of selection and procurement at national level.

11. BLOOD PRODUCTS OF HUMAN ORIGIN ANI	D PLASMA SUBSTITUTES	
11.1 Blood and blood components		
In accordance with the World Health Assembly resolution WHA63.12, WHO recognizes that achieving self-sufficiency, unless special circumstances preclude it, in the supply of safe blood components based on voluntary, non-remunerated blood donation, and the security of that supply are important national goals to prevent blood shortages and meet the transfusion requirements of the patient population. All preparations should comply with the WHO requirements.		
fresh-frozen plasma		
platelets		
red blood cells		
whole blood		
11.2 Plasma-derived medicines		
All human plasma-derived medicines should comply with	h the WHO requirements.	
11.2.1 Human immunoglobulins		
anti-D immunoglobulin	Injection: 250 micrograms in single-dose vial.	
Anti-rabies immunoglobulin	Injection: 150 IU/ mL in vial.	
Anti-tetanus immunoglobulin	Injection: 500 IU in vial.	
Complementary List		
	Intramuscular administration: 16% protein solution.*	
	Intravenous administration: 5%; 10% protein solution.**	
normal immunoglobulin	Subcutaneous administration: 15%; 16% protein solution.*	
J	* Indicated for primary immune deficiency. **Indicated for primary immune deficiency and Kawasaki disease.	
11.2.2 Blood coagulation factors		
Complementary List		
□ coagulation factor VIII	Powder for injection: 500 IU/vial.	
□ coagulation factor IX	Powder for injection: 500 IU/vial, 1000 IU/vial.	
11.3 Plasma substitutes		
	Injectable solution: 6%.	
□ dextran 70*	* Polygeline, injectable solution, 3.5% is considered as equivalent.	
12. CARDIOVASCULAR MEDICINES		
12.1 Antianginal medicines		
□ bisoprolol*	<b>Tablet:</b> 1.25 mg; 5 mg.	
	* □ includes metoprolol and carvedilol as alternatives.	

glyceryl trinitrate	Tablet (sublingual): 500 micrograms.
☐ isosorbide dinitrate	Tablet (sublingual): 5 mg.

#### 19.3 Vaccines

WHO immunization policy recommendations are published in vaccine position papers on the basis of recommendations made by the Strategic Advisory Group of Experts on Immunization (SAGE).

WHO vaccine position papers are updated three to four times per year. The list below details the vaccines for which there is a recommendation from SAGE and a corresponding WHO position paper as at **December 2018**. The most recent versions of the WHO position papers, reflecting the current evidence related to a specific vaccine and the related recommendations, can be accessed at any time on the WHO website at:

#### http://www.who.int/immunization/documents/positionpapers/en/index.html.

Vaccine recommendations may be universal or conditional (e.g., in certain regions, in some high-risk populations or as part of immunization programmes with certain characteristics). Details are available in the relevant position papers, and in the Summary Tables of WHO Routine Immunization Recommendations available on the WHO website at:

#### http://www.who.int/immunization/policy/immunization\_tables/en/index.html.

Selection of vaccines from the Model List will need to be determined by each country after consideration of international recommendations, epidemiology and national priorities.

All vaccines should comply with the WHO requirements for biological substances.

WHO noted the need for vaccines used in children to be polyvalent.

carbamazepine	Tablet (scored): 100 mg; 200 mg.
lithium carbonate	Solid oral dosage form: 300 mg.
valproic acid (sodium valproate)	Tablet (enteric-coated): 200 mg; 500 mg (sodium valproate).
24.3 Medicines for anxiety disorders	
□ diazepam	Tablet (scored): 2 mg; 5 mg.
24.4 Medicines used for obsessive compulsive d	isorders
clomipramine	Capsule: 10 mg; 25 mg (hydrochloride).
24.5 Medicines for disorders due to psychoactive	e substance use
	Chewing gum: 2 mg; 4 mg (as polacrilex).
nicotine replacement therapy (NRT)	<b>Transdermal patch:</b> 5 mg to 30 mg/16 hrs; 7 mg to 21 mg/24 hrs.
Complementary List	,
	Concentrate for oral liquid: 5 mg/ mL; 10 mg/ mL (hydrochloride).
□ methadone*	Oral liquid: 5 mg/5 mL; 10 mg/5 mL (hydrochloride).
□ methadone	* The square box is added to include buprenorphine. The medicines should only be used within an established support programme.
25. MEDICINES ACTING ON THE RESPIRA	TORY TRACT
25.1 Antiasthmatic medicines and medicines for	chronic obstructive pulmonary disease
□ beclometasone	Inhalation (aerosol): 50 micrograms (dipropionate) per dose; 100 micrograms (dipropionate) per dose (as CFC free forms).
□ budesonide [c]	Inhalation (aerosol): 100 micrograms per dose; 200 micrograms per dose.
□ budesonide + formoterol	<b>Dry powder inhaler:</b> 100 micrograms + 6 micrograms per dose; 200 micrograms + 6 micrograms per dose
epinephrine (adrenaline)	Injection: 1 mg (as hydrochloride or hydrogen tartrate) in 1- mL ampoule.
ipratropium bromide	Inhalation (aerosol): 20 micrograms/metered dose.
	Inhalation (aerosol): 100 micrograms (as sulfate) per dose.
	Injection: 50 micrograms (as sulfate)/ mL in 5- mL ampoule.
□ salbutamol	<b>Metered dose inhaler (aerosol):</b> 100 micrograms (as sulfate) per dose.
	Respirator solution for use in nebulizers: 5 mg (as sulfate)/ mL.
□ tiotropium	Powder for inhalaton, capsule: 18 micrograms
	<b>Inhalation solution:</b> 1.25 micrograms; 2.5 micrograms per actuation

## Table 1.2: Explanation of dosage forms

### A. Principal dosage forms used in EML – oral administration

Term	Definition
Solid oral dosage form	Refers to tablets or capsules or other solid dosage forms such as 'melts' that are immediate-release preparations. It implies that there is no difference in clinical efficacy or safety between the available dosage forms, and countries should therefore choose the form(s) to be listed depending on quality and availability.  The term 'solid oral dosage form' is <i>never</i> intended to allow any type of modified-release tablet.
Tablets	<ul> <li>Refers to:</li> <li>uncoated or coated (film-coated or sugar-coated) tablets that are intended to be swallowed whole;</li> <li>unscored and scored*;</li> <li>tablets that are intended to be chewed before being swallowed;</li> <li>tablets that are intended to be dispersed or dissolved in water or another suitable liquid before being swallowed;</li> <li>tablets that are intended to be crushed before being swallowed.</li> <li>The term 'tablet' without qualification is <i>never</i> intended to allow any type of modified-release tablet.</li> </ul>
Tablets (qualified)	Refers to a specific type of tablet:  chewable - tablets that are intended to be chewed before being swallowed; dispersible - tablets that are intended to be dispersed in water or another suitable liquid before being swallowed; soluble - tablets that are intended to be dissolved in water or another suitable liquid before being swallowed; crushable - tablets that are intended to be crushed before being swallowed; scored - tablets bearing a break mark or marks where sub-division is intended in order to provide doses of less than one tablet; sublingual - tablets that are intended to be placed beneath the tongue.  The term 'tablet' is always qualified with an additional term (in parentheses) in entries where one of the following types of tablet is intended: gastroresistant (such tablets may sometimes be described as enteric-coated or as delayed-release), prolonged-release or another modified-release form.

<sup>\*</sup> Scored tablets may be divided for ease of swallowing, provided that dose is a whole number of tablets. 21st WHO Model List of Essential Medicines (2019)

Capsules	Refers to hard or soft capsules.  The term 'capsule' without qualification is <i>never</i> intended to allow any type of modified-release capsule.
Capsules (qualified)	The term 'capsule' with qualification refers to <b>gastro-resistant</b> (such capsules may sometimes be described as enteric-coated or as delayed-release), <b>prolonged-release</b> or another modified-release form.
Granules	Preparations that are issued to patient as granules to be swallowed without further preparation, to be chewed, or to be taken in or with water or another suitable liquid.  The term 'granules' without further qualification is <i>never</i> intended to allow any type of modified-release granules.
Oral powder	Preparations that are issued to patient as powder (usually as single-dose) to be taken in or with water or another suitable liquid.
Oral liquid	Liquid preparations intended to be <i>swallowed</i> i.e. oral solutions, suspensions, emulsions and oral drops, including those constituted from powders or granules, but <i>not</i> those preparations intended for <i>oromucosal administration</i> e.g. gargles and mouthwashes.  Oral liquids presented as powders or granules may offer benefits in the form of better stability and lower transport costs. If more than one type of oral liquid is available on the same market (e.g. solution, suspension, granules for reconstitution), they may be interchanged and in such cases should be bioequivalent. It is preferable that oral liquids do not contain sugar and that solutions for children do not contain alcohol.

### B. Principal dosage forms used in EML – parenteral administration

Term	Definition
Injection	Refers to solutions, suspensions and emulsions including those constituted
	from powders or concentrated solutions.
Injection (qualified)	Route of administration is indicated in parentheses where relevant.
Injection (oily)	The term `injection' is qualified by `(oily)' in relevant entries.
Intravenous infusion	Refers to solutions and emulsions including those constituted from powders
	or concentrated solutions.

## C. Other dosage forms

Mode of administration	Term to be used
To the eye	Eye drops, eye ointments.
Topical	For liquids: lotions, paints.
	For semi-solids: cream, ointment.
Rectal	Suppositories, gel or solution.
Vaginal	Pessaries or vaginal tablets.
Inhalation	Powder for inhalation, pressurized inhalation, nebulizer.
